

BOMBARDIER

Master's Thesis:

Value Stream Mapping and Digitalization

Background

Much potential for improvements is hidden in our way-of-working, and many times it is beneficial to take help from externals to identify this potential. Moreover, we are still doing work that might be possible to digitalize. We expect opportunities for digitalization will be revealed in a value stream mapping.

Objective

The main objective of the master's thesis is to

- Apply Value Stream Mapping on (a selection of) our processes in production and/or logistics
- Identify potentials for improvements
- Identify areas of digitalization opportunity

Application

Prerequisites: Engineer within Production and/or Logistics.

For more information, contact production and developer Gustav Berglund (+46 70 412 9626) and logistics developer Suhasini Chandrasekharan (+46736405675)
